SUMMARY

Cybersecurity professional with experience delivering vulnerabilities to organizations. Disclosed numerous vulnerabilities across open-source and large-scale software projects such as NASA's CryptoLib, Open-SMTPD, and Sliver, resulting in CVE-2026-77622 and numerous public security advisories. Earned the OffSec OSCE3 certification at age 17 after completing the OffSec certification trio, ranking among the youngest individuals to earn the certification.

SKILLS

Development: Python, C, C++, Go, Bash, PowerShell, SQL

Information Technology: Linux, Windows, Active Directory, Azure, AWS, IAM, SCADA/ICS, Networking

Information Security: Offensive Security, Reverse Engineering, Threat Analysis, Adversary Emulation, MITRE ATT&CK

EDUCATION

University of Cincinnati

Bachelor of Science, Cybersecurity

Cincinnati, OH

Anticipated May 2029

Sinclair Community College

Information Systems Security Certificate

Dayton, OH

May 2026

EXPERIENCE

Freelance

Security Researcher

Cincinnati, OH

January 2026 – Present

- Conducted independent vulnerability research against open-source projects including NASA, Bishop Fox, OpenBSD, and Microsoft, identifying, reproducing, and responsibly disclosing security vulnerabilities resulting in CVE assignments and public security advisories.
- Performed source code review and security analysis across Google, GitLab, Epic Games, Nextcloud, and other large-scale software projects to identify vulnerabilities in application logic, authentication mechanisms, and underlying code.
- Developed detailed vulnerability reports containing technical root-cause analysis, reproduction steps, proof-of-concept code, affected components, and security impact to assist maintainers in reproducing and remediating reported vulnerabilities.

Leadership Initiatives

Cybersecurity Intern

Washington D.C.

June 2022

- Performed cybersecurity assessments for startup organizations to identify security weaknesses, evaluate existing controls, and recommend improvements to cybersecurity practices.
- Developed technical presentations and delivered cybersecurity briefings to communicate assessment results, security risks, and recommended remediation strategies.
- Presented cybersecurity findings and recommendations to technical and non-technical stakeholders, translating complex security concepts into clear and actionable guidance.

PROJECTS

Active Directory Home Lab

- Designed and deployed an Active Directory cyber range using Game of Active Directory (GOAD) and Ludus to simulate enterprise environments and security scenarios.
- Executed offensive and defensive security exercises within the environment to identify vulnerabilities, exploit security weaknesses, and simulate realistic enterprise attack and defense scenarios.
- Deployed and configured a Rapid SCADA environment to simulate industrial control systems (ICS) and explore security challenges within operational technology (OT) environments.

CERTIFICATIONS

OffSec: OSCE3, OSEP, OSED, OSWE

CompTIA: PenTest+, Ethical Hacker Pro, Hybrid Server Pro
